

Fullerton Lux Funds - Asian Currency Bonds - Class A (SGD) Dis

April 2025

Investment Objective

The investment objective of the Fund is to generate long term capital appreciation for investors.

Investment Focus and Approach

The Fund seeks to achieve its objective by investing in fixed income or debt securities, including convertibles, denominated primarily in Asian currencies and primarily issued by companies, governments, quasi-governments, government agencies or supranationals in the Asian region. These countries may include, but are not limited to China (including Hong Kong SAR and Taiwan), South Korea, India, Thailand, Malaysia, Singapore, Indonesia, the Philippines and Vietnam. The Investment Manager seeks to generate alpha through interest rate, credit and currency strategies by evaluating the relative value across markets and the outlook for credit. These views form the basis for formulating their duration, bond market allocation, currency and credit strategies. The Fund will be permitted to invest in fixed income or debt securities which are unrated or rated non-investment grade.

SFDR Classification:

Article 8 fund.

In line with its ESG methodology, the fund promotes environmental characteristics but does not commit to make environmentally sustainable investments as defined in the taxonomy regulation.

Performance (%)

	1 mth	3 mths	6 mths	1 yr	3 yrs	5 yrs	10 yrs	Sl. Ann. Ret.	Sl. Ann. Vol.
Fund (bid-to-bid)	0.07	-0.10	1.39	5.66	-0.17	-0.83	1.24	1.93	3.99
Fund (offer-to-bid)	-4.70	-4.86	-3.43	0.62	-1.78	-1.79	0.74	1.58	NA
Benchmark	0.19	0.10	2.02	7.03	2.02	0.76	2.52	2.98	3.79

Returns of more than 1 year are annualised.

Returns are calculated on a single pricing basis in SGD with net dividends and distributions (if any) reinvested. Offer-to-bid returns include an assumed preliminary charge of 5% which may or may not be charged to investors. Past performance is not indicative of future returns.

Benchmark: Markit iBoxx ALBI Index

With effect from 1 May 2016, the benchmark has been changed to Markit iBoxx ALBI Index. Prior to 1 May 2016, the index was HSBC Asian Local Bond Index.

Market Review

Volatility in global rates markets was a defining feature in April, driven by geopolitical developments in the United States. The announcement of sweeping U.S. tariffs under President Trump's "Liberation Day" policy on April 2 triggered a sharp flight to safety environment, sending Treasury yields to year-to-date lows by April 4. That however, subsequently gave way to rising yields as elevated market volatility triggered an exodus from crowded trades. Despite the mid-month turbulence, softer economic data toward month-end shifted sentiment back toward policy easing. The 10-year US Treasury yield ultimately closed the month slightly lower at 4.16%, down from 4.21% in March, having traded in a wide 72 basis point range in April.

In contrast, the Asian local markets, as indicated by the iBoxx Asian Local Bond Index (ALBI), recorded a gain of 2.8% in unhedged USD terms. The increases were fuelled by growth across all local (duration) markets, along with foreign exchange gains against the U.S. dollar in most regions, with the exception of the Indonesian rupiah and the renminbi. In the local currency bond markets, India maintained its position as the top performer, while South Korea followed closely. In contrast, the Philippines and China Offshore were the weakest performers, even though they still recorded modest gains. Currency-wise, almost all Asian currencies appreciated against the US dollar, led by the Taiwanese dollar, Korean won and the Malaysian ringgit.

Market Review (Cont'd)

Asia USD credit markets posted mixed results in April, reflecting a bifurcation between the investment-grade and high-yield segments. Investment-grade credits delivered modest gains, supported by duration gains, even as average credit spreads widened. In contrast, high-yield names came under pressure, with broader spread widening more than offsetting the positive impact from declining yields, resulting in underperformance relative to their investment-grade counterparts.

Investment Strategy

Global markets are showing tentative signs of stabilisation following the partial de-escalation of U.S.-China trade tensions. The announcement of a 90-day pause on reciprocal tariffs, alongside renewed bilateral negotiations, has helped alleviate near-term recession fears in the U.S. and dampened volatility across global risk assets. In this environment, the U.S. Federal Reserve is expected to maintain its data-dependent stance, with a clear easing bias should systemic risks re-emerge, or growth conditions deteriorate meaningfully.

Importantly, the more constructive trade rhetoric has reduced the urgency for additional fiscal stimulus from China. Expectations for new policy measures at the upcoming July Politburo meeting have been tempered, as authorities evaluate the cumulative impact of prior stimulus and the evolving external backdrop. The macro outlook remains finely balanced, with policy flexibility continuing to serve as a critical stabilising force amid persistent global uncertainty.

Against this backdrop, we continue to express portfolio risk primarily through interest rate duration, where conviction is higher relative to currency markets. We maintain an overweight bias toward local currency duration in markets where rate cuts remain on the table, or where real yields are still compelling. This includes Korea (KRW), the Philippines (PHP), India (INR), Thailand (THB), and Malaysia (MYR), where inflation prints are also within the respective central bank's targets.

In the currency space, we retain a structurally negative bias on the U.S. dollar. This view reflects rising concerns over fiscal slippage, weakening institutional credibility, and waning foreign demand for U.S. assets. Rather than expressing broad directional views, we are focused on relative value opportunities within Asia FX.

Specifically, we favour long positions in INR, PHP, and MYR—currencies supported by resilient macro fundamentals, attractive carry, and a relatively resilient domestic demand—versus short positions in RMB, SGD, and THB, which are more vulnerable to trade frictions and constrained by lower yield differentials. This approach allows us to capture regional divergences while maintaining a disciplined risk framework in a fluid policy environment.

* Figures have been truncated to 2 decimal places. The official price is published on Fullerton's website.
